Memorandum

To: Distribution

From: Carl S. Peil, P.E.  
Preconstruction Engineer *Carl S. Peil*

Date: August 21, 2002

Subject: Project Connections to the Existing Roadway

We will now show station call-outs on the title sheet of the plans for connections at the beginning and end of projects where the connections extend beyond the project limits. The station call-outs will be provided as an aid to the Fiscal Programming Section in the preparation of the project programming documents.

Show the connections as indicated on the attached title sheet example. Do not provide station call-outs when the connections are located within the project limits.

The following items will remain unchanged:

- 1 The beginning and ending stations of the project on the title sheet should still match the beginning and ending stations shown on the plan & profile sheets.

The lengths shown in the linear data correspond to the beginning and ending project stations on the title sheet and the plan & profile sheets with the necessary adjustments for project equations. They do not include the length of connections beyond the project limits.

This change should be implemented for all appropriate projects that have not been checked.

If you have any questions please contact me or Paul Ferry.
